

Waybill Tracking "Pending" Issue - Fix Guide

Root Cause Analysis & Comprehensive Step-by-Step Implementation Plan

1. ISSUE OVERVIEW & SYSTEM ARCHITECTURE

Problem: WhatsApp waybill tracking messages are successfully delivered to customers, but the order on the Glowix Books admin dashboard continuously displays status **"Pending"** instead of updating to **"Sent"** / **"Shipped"**.

- 1 Admin clicks **"Send Waybill Notifications"** in Orders Dashboard.
- 2 Frontend invokes Edge Function `send-whatsapp-glowix_books`.
- 3 WAHA Engine delivers message to customer's WhatsApp successfully (HTTP 200).
- 4 **Database Update Fails:** Frontend attempts `UPDATE orders SET waybill_sent_at = NOW()`. PostgreSQL throws an error because column is missing or schema cache is stale.
- 5 **Silent Failure:** Frontend doesn't validate DB update error, displays success message, leaving `waybill_sent_at` as `NULL` in DB.

Key Findings

- **WhatsApp Gateway Working:** Messages are properly delivered to end-users via WAHA API.
- **Silent UI Failure:** `SendWaybillModal.tsx` lacks error handling on the database update call, giving false positive feedback to admins.
- **Schema Cache Out-of-Sync:** Column `waybill_sent_at` was absent from baseline schema and PostgREST API cache was not reloaded after migration.
- **Audience Queue Stalled:** Because timestamp remains `NULL`, orders stay in the pending queue and risk duplicate notification attempts.

2. STEP-BY-STEP FIX PLAN

Phase 1: Live Server Database Fix (Immediate)

Execute the following commands in **Supabase Studio > SQL Editor** or via direct `psql` connection:

```
-- Step 1: Ensure waybill_sent_at column exists on glowix_books.orders
ALTER TABLE glowix_books.orders
ADD COLUMN IF NOT EXISTS waybill_sent_at TIMESTAMP WITH TIME ZONE NULL;

-- Step 2: Create index for fast filtering of pending/sent waybills
CREATE INDEX IF NOT EXISTS idx_orders_waybill_sent_at
ON glowix_books.orders(user_id, waybill_sent_at)
WHERE waybill_number IS NOT NULL;

-- Step 3: Crucial - Reload PostgREST schema cache so API recognizes column
NOTIFY pgrst, 'reload schema';
```

Phase 2: Fix Existing Affected Order Records

For orders where the customer already received the tracking notification (e.g., Kapilash #cfe5bbbf), update the record directly so it transitions out of the pending list without resending WhatsApp messages:

```
-- Mark Kapilash's order as already sent and transition status to shipped
UPDATE glowix_books.orders
SET
  waybill_sent_at = NOW(),
  status = CASE
    WHEN status IN ('pending', 'processing') THEN 'shipped'
    ELSE status
  END
WHERE customer_phone LIKE '%740237915%'
   OR id::text LIKE 'cfe5bbbf%';
```

Phase 3: Codebase Preventative Updates

1. Enhance Error Handling in `SendWaybillModal.tsx`:

```
// Mark order as waybill_sent_at in Database
const now = new Date().toISOString();
- await supabase
+ const { error: updateErr } = await supabase
  .from("orders")
  .update({
    waybill_sent_at: now,
    ...(order.status === "pending" || order.status === "processing"
      ? { status: "shipped" }
      : {}),
  })
  .eq("id", order.id);

+ if (updateErr) {
+   console.error(`Failed to update waybill_sent_at:`, updateErr);
+   throw new Error(`WhatsApp sent, but DB update failed: ${updateErr.message}`);
+ }

successCount++;
```

2. Include in Baseline Schema (`db/01_schema.sql`):

```
secondary_phone text,
waybill_number text,
waybill_updated_at timestamp with time zone,
+ waybill_sent_at timestamp with time zone,
CONSTRAINT orders_payment_method_check CHECK ((payment_method = ANY (...))),
```

3. VERIFICATION & VALIDATION CHECKLIST

Test Item	Action / Method	Expected Result
1. Database Column	Inspect table structure in DB	waybill_sent_at is present with timestamptz data type.
